DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/4/08 been entered.

Claim Rejections - 35 USC § 112

Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The recitation "free of recesses" amounts to a negative limitation indicating that the surface does not have recesses. This recitation excludes recesses and since such an exclusion was not been set forth in the application as originally filed, it is considered new matter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 6, 9-11, 13, 19-25, 28, 29, 31 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Newman (608832).

Newman (608832) teaches the invention as claimed including an article of swimwear comprising, in combination: a swimsuit body (10) having at least one aperture (24-27) configured to encircle a portion of a swimmer's body when the swimsuit body is worn by a user; a resilient seal (31) secured about the at least one aperture. Note that the strip is attached by adhesion or stitching. Note that the seal encircles waist and legs. Concerning the recitation "wherein a surface of the resilient seal that is to contact the swimmer's body is free of recesses", clearly the raised surface portion (36) of the seal (31) that contacts the swimmer's body in Newman is free of recesses to the extent applicant's surface is free of recesses.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 7, 8, 12, 14-18, 26, 27, 30, 32 and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newman (608832).

Newman teaches the invention as claimed as set forth above in the rejection to claim 1.

Newman (6088832) does not teach welding for securing the seal to the swimsuit. The examiner takes official notice that it is well known to secure garment elements via welding. Therefore it would have been at the time the invention was made to substitute welding for stitching or adhesive for securing the seal to the garment since any of these would provide an equivalent securing function.
